EDUCATION

University of California, Los Angeles

B.S. in Computer Engineering | GPA: 3.8 | Expected June 2029

Relevant Coursework: Data Structures and Algorithmic Complexity, Software Construction, Computer Architecture, C++ Programming, Discrete Mathematics, Logic Design

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, SQL, HTML/CSS

Frameworks and Libraries: Flask, PyTorch, scikit-learn, pandas

Tools and Databases: Git, Linux, SQLite, REST APIs, GraphQL

EXPERIENCE

Helios RS | AI / Machine Learning Intern | Jun 2026–Present

- Leading development of an automated crack-detection system for building imagery, owning system architecture and end-to-end implementation.
- Identified U-Net as the stronger model for nine-class image segmentation with limited data by benchmarking U-Net and transformer architectures in PyTorch.
- Prepared segmentation models and code for team reuse by writing and organizing technical documentation for onboarding.

The Lundquist Institute, Harbor-UCLA | Biomedical Research Assistant

Jun 2024–Dec 2025

- Co-authored an IDWeek 2025 abstract published in Open Forum Infectious Diseases (2026) by cleaning and validating clinical study data and producing analysis tables and graphics.

PROJECTS

League of Legends Match History Dashboard | GitHub

- Built a full-stack dashboard displaying up to 10 recent matches per player by integrating Riot Games APIs with a Python/Flask backend and HTML/CSS views.
- Combined player rankings, match statistics, and game assets in one interface by joining Riot API responses with Data Dragon data and handling rate-limit retries.

RateMyProfessors Rating Prediction | GitHub

- Processed approximately 400,000 reviews through a Python pipeline using paginated GraphQL requests, exponential-backoff retries, and normalized SQLite storage.
- Prevented duplicate records and enforced review-to-professor relationships through primary-key deduplication and foreign-key constraints across a four-table SQLite schema.
- Built reusable feature and model modules for clarity and difficulty prediction using TF-IDF and NMF, evaluating generalization with professor-grouped cross-validation.

LEADERSHIP

UCLA Japanese Student Association | Career Team Officer | Oct 2025–Present

- Organized the first joint networking event with the Japanese Business Association (JABA) by coordinating MBA participant outreach and event logistics.

HONORS AND AWARDS

- Gold Shield Alumni Scholarship Recipient
- Upsilon Pi Epsilon Honor Society (top 1/3 of class)
